## **DETAILED ACTION**

## Election/Restrictions

Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group 1, claim(s) 1-14, 18-19 and 21, drawn to compound.

Group 2, claim(s) 15-19, 21, 39 and 41-44, drawn to nucleic acid.

Group 3, claim(s) 22-29, drawn to method of immunizing an animal or combating disease by way of compound administration.

Group 4, claim(s) 22-29, drawn to method of immunizing an animal or combating disease via nucleic acid administration.

Group 5, claim(s) 38, drawn to method of making a compound.

Group 6, claim(s) 40, drawn to method of making a nucleic acid.

Group 7, claim(s) 45-46, drawn to a method of determining whether an animal has been administered a compound.

Group 8, claim(s) 47-50, drawn to a kit comprising a compound.

Group 9, claim(s) 47-50, drawn to a kit comprising a nucleic acid.

Note that claim 27 is an improper multiple dependent claim.

The inventions listed as Groups 1-9 do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or

Application/Control Number: 10/566,866

Art Unit: 1648

corresponding special technical features for the following reasons: The groups are directed to a product comprising a moiety which binds to a dendritic cell and an antigen. However, since Hawiger et al. (2002/187131-cited) disclose the same product, no special technical feature exists as defined by PCT Rule 13.2, because it does not define a contribution over the prior art. Hawiger et al provide the following recitation: Methods are provided for the enhanced delivery of an antigen to antigenpresenting cells such as dendritic cells by conjugating an antigen to a molecule targeted to an endocytic receptor on the dendritic cell, such as DEC-205. The molecule targeted to an endocytic receptor may be a natural ligand to the receptor or an antibody thereto. Conjugates may be covalent complexes or single-chain polypeptides. Together with modulation of the maturation of the dendritic cell, an enhanced immune response or tolerizing immune response may be generated to the antigen. In addition, conjugate molecules including single-chain polypeptides are provided which contain at least an endocytic receptor-binding molecule and a preselected antigen. See Abstract. Note that PCT Rule 13 does not provide for multiple products or methods within a single application. Because the shared technical feature of Groups 1-9 is not a special technical feature within the meaning of PCT Rule 13.2, unity of invention is lacking.

Page 3

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

This application contains claims directed to more than one species of the generic invention. These species are deemed to lack unity of invention because they are not so linked as to form a single general inventive concept under PCT Rule 13.1.

The species are as follows:

A specific moiety characterized by what it specifically binds (e.g. HIV gp 120, glycoprotein of Ebola, etc- see claims 3 and 5).

Applicant is required, in reply to this action, to elect a single species to which the claims shall be restricted if no generic claim is finally held to be allowable. The reply must also identify the claims readable on the elected species, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered non-responsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

The claims are deemed to correspond to the species listed above in the following manner:

The following claim(s) are generic: All claims are generic with respect to a specific compound or a nucleic acid specifically encoding a specific compound.

The species listed above do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, the species lack the same or corresponding special technical features for the following reasons: The different species above are different in structure and thus, function. For example a nucleic acid and a protein are both structurally and functionally different. In addition, a moiety that would bind, for example, a HIV gp120 would be expected to be structurally different to that that would bind a glycoprotein of Ebola.

Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species or invention to be examined even though the requirement may be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

The election of an invention or species may be made with or without traverse. To preserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse.

The examiner has required restriction between product and process claims. Where applicant elects claims directed to the product, and the product claims are subsequently found allowable, withdrawn process claims that depend from or otherwise require all the limitations of the allowable product claim will be considered for rejoinder.

All claims directed to a nonelected process invention must require all the limitations of an allowable product claim for that process invention to be rejoined.

In the event of rejoinder, the requirement for restriction between the product claims and the rejoined process claims will be withdrawn, and the rejoined process claims will be fully examined for patentability in accordance with 37 CFR 1.104. Thus, to

Application/Control Number: 10/566,866

Art Unit: 1648

be allowable, the rejoined claims must meet all criteria for patentability including the requirements of 35 U.S.C. 101, 102, 103 and 112. Until all claims to the elected product are found allowable, an otherwise proper restriction requirement between product claims and process claims may be maintained. Withdrawn process claims that are not commensurate in scope with an allowable product claim will not be rejoined. See MPEP § 821.04(b). Additionally, in order to retain the right to rejoinder in accordance with the above policy, applicant is advised that the process claims should be amended during prosecution to require the limitations of the product claims. Failure to do so may result in a loss of the right to rejoinder. Further, note that the prohibition against double patenting rejections of 35 U.S.C. 121 does not apply where the restriction requirement is withdrawn by the examiner before the patent issues. See MPEP § 804.01.
